13. Tips & Best Practices 17

1. Understanding Admin Roles

HIBCW uses three distinct roles in the admin panel. Understanding the difference is essential for managing the platform effectively.

Feature	Admin	Superadmin
View all incidents	✅ All districts	✅ All districts
Archive / restore incidents	✅ All districts	✅ All districts
Delete incidents permanently	✅ Yes	✅ Yes
Bulk archive / delete	✅ Yes	✅ Yes
Add / remove verified members	✅ Yes	✅ Yes
Edit member profiles	✅ Yes	✅ Yes
Import member CSV	✅ Yes	✅ Yes
Approve / reject applications	✅ All districts	✅ All districts
Delete applications	✅ Yes	✅ Yes
Assign district captains	✅ Yes	✅ Yes
Upload captain photos	✅ Any district	✅ Any district
Send district alerts	✅ Any district	✅ Any district
Delete district alerts	✅ Yes	✅ Yes
Export CSV (incidents/members)	✅ Yes	✅ Yes
Invite new admins / captains	❌ No	✅ Yes
Remove admin accounts	❌ No	✅ Yes
Edit admin roles & districts	❌ No	✅ Yes
Access Manage Admins screen	❌ No	✅ Yes

💡 **Key Distinction**

Admins and Superadmins have near-identical access to day-to-day operations. The only actions exclusive to Superadmins are those that affect admin accounts themselves — inviting new users, removing accounts, and changing roles. This ensures the admin roster can only be managed by the most trusted users.

2. Signing In

Admins access the panel at your deployment URL with “/admin.html” appended (e.g., hibcw.vercel.app/admin.html). A mobile-optimized version is also available at “/admin-mobile.html”.

- Enter your email address and password and click “Sign In →”
- If you’ve forgotten your password, click “Forgot password?” to receive a reset link
- On mobile devices, visiting admin.html will prompt you to switch to the mobile version automatically

> 🔑 **Account Setup**
> Admin accounts are created by a Superadmin via the Manage Admins screen. You cannot self-register. If you need access, contact your HIBCW Superadmin and provide your email address and the role you require.

3. The Admin Interface

The desktop admin panel uses a fixed left sidebar for navigation and a main content area on the right. The mobile version uses a bottom tab bar with six tabs. Both surfaces connect to the same live Supabase database.

3.1 Desktop Navigation (admin.html)

- 🚨 Active Incidents — currently reported, active incidents
- 📦 Archived Incidents — resolved or removed from the public map
- 📋 All Incidents — combined view with status column
- 📈 Statistics — incident counts, type breakdown, district breakdown
- 🗺️ Map View — interactive leaflet map of all incidents
- 📍 Districts — captain cards, directory, alert tools
- 👥 Members — verified member management (admin-only tab)
- 📋 Applications — membership application review and approval
- 🔐 Manage Admins — invite/remove admin accounts (superadmin-only tab)

3.2 Mobile Navigation (admin-mobile.html)

- 🚨 Incidents — searchable incident list with tap-to-detail
- 📊 Stats — stat tiles and type/district breakdown bars
- 👥 Members — member cards (admin-only tab)

- 📋 Apply — application review with pending badge count
- 📍 Districts — captain overview, directory, and alert tools
- ☰ More — account info, CSV exports, theme toggle, sign out

3.3 Real-Time Updates

Both panels subscribe to Supabase real-time channels. New incidents and district alerts appear instantly without requiring a page refresh. A live indicator dot in the header turns teal when connected and gold when reconnecting.

4. Incident Management

4.1 Viewing & Searching Incidents

The Active, Archived, and All Incidents views each show a sortable table of incidents. Use the search bar to search across type, address, description, and reporter name.

- Active — incidents currently visible on the public map
- Archived — incidents removed from public view but retained in the database
- All — combined view with a Status column; useful for cross-status searches

4.2 Filtering Incidents

Each incident view has an advanced filter panel accessible via the "⚙️ Filters" button. Filters are additive — multiple filters narrow results simultaneously.

- Type — filter by incident category (Robbery, Burglary, Assault, etc.)
- Date Range — filter by custom start and end dates
- District — filter to a specific HIBCW district
- Radius Search — enter an address and radius in miles to find nearby incidents

Active filters appear as dismissible chips below the toolbar. Click the ✕ on any chip to remove that filter, or use "Clear All" to reset.

4.3 Archiving, Restoring & Deleting

Each incident has three possible actions depending on its current status:

- 📦 Archive — removes the incident from the public map without deleting it. Use this for resolved incidents, confirmed duplicates, or reports under review.
- ↩️ Restore — returns an archived incident to active status and the public map.
- 🗑️ Delete — permanently removes the incident and all associated media files from the database and storage. This cannot be undone.

> ⚠️ **Delete is Permanent**
> Deleting an incident removes it from the database forever, including all uploaded photos and videos. Always archive first unless you are certain the report is invalid. When in doubt, archive — not delete.

4.4 Bulk Actions

On the Active incidents view, you can select multiple incidents using the checkboxes on the left of each row. A bulk action bar appears at the top when selections are made.

1. Check the box next to each incident you want to act on (or use the header checkbox to select all visible rows)
2. The bulk action bar appears showing the count of selected items
3. Click "📦 Archive Selected" or "🗑️ Delete Selected"
4. Confirm when prompted

> 💡 **Tip**
> Use the type and date filters to narrow down a set of incidents before using bulk select. For example, filter to a specific type from a specific date range, then bulk archive all results at once.

4.5 Incident Detail & Notes

Click "View" on any incident row (or tap any card on mobile) to open the full detail panel. This shows:

- Date, time, and age tag
- District and assigned captain contact card
- Address with Google Maps Street View link (if GPS coordinates exist)
- Full description
- Reporter name (or Anonymous)
- Police report number (if filed)
- Suspect description (height, build, age, gender, race, clothing, other)
- Vehicle description (make, model, color, year, plate, notes)
- Attached media (photos and videos, click to open lightbox)
- Follow-up notes log with the ability to add new notes or delete existing ones

Notes are visible to all admin and captain users and are never shown on the public site. Use them to track follow-up actions, police contact, community feedback, or resolution status.

4.6 Exporting Incidents to CSV

Each incident view has an "⬇️ Export CSV" button in the toolbar. The export includes all visible rows (after any active filters) with the following fields:

- ID, Type, Status, Date/Time, Address, Description, Reporter, Police Report #
- Full suspect description fields
- Full vehicle description fields

- GPS coordinates (Lat/Lng), media count, and submission timestamp

The file is named automatically with the view name and today's date, e.g., HIBCW_active_2026-03-14.csv.

5. Member Management

The Members screen manages the list of verified HIBCW members. Verified members receive a "✅ Verified Member" badge on any incidents they report through the public site.

5.1 Viewing & Searching Members

- Search by name, email, phone, business name, city, state, or zip code
- Filter by district using the district dropdown
- Each row shows: name, email, phone, business, address, district, captain, date added, and days active

5.2 Adding Members

You can add a verified member directly by email without requiring them to submit an application.

Step 1 Enter Email

Type the member's email address in the "Enter email address to add…" field at the top of the Members screen

Step 2 Add to List

Press Enter or click "＋ Add Member"

The email is added to the verified member list immediately

Their reports will show the verified badge from this point forward

> 💡 **Note**
> Adding a member by email creates a basic verified record. To attach a full profile (name, business, address, district), either ask the member to submit an application and approve it, or use the Edit function to fill in the details manually.

5.3 Importing Members via CSV

You can bulk-add members by uploading a CSV file.

5. Click "⬆️ Import CSV" in the Members toolbar
6. Select a CSV file where each row contains an email address in the first column
7. The system adds all emails not already in the list
8. Duplicate emails are silently skipped

5.4 Editing Member Profiles

Click "✏️ Edit" on any member row to open the full edit form. You can update:

- Full name
- Email address
- Phone number
- Business name, address, city, state, and zip
- District assignment
- Captain name (the district captain serving this member)
- Profile photo (upload JPG, PNG, or WebP up to 4 MB)

Click "Save Changes" to apply. Changes take effect immediately across the admin panel and district directory.

5.5 Removing Members

Click "Remove" on any member row to remove them from the verified members list. This removes their verified status — future reports from that email will no longer show the member badge. Their past reports are not affected.

5.6 Exporting Members to CSV

Click "⬇️ Export CSV" in the Members toolbar to download all members. The export includes: number, full name, email, phone, business name, address, city, state, zip, district, captain, date added, and days active.

6. Application Management

The Applications screen shows all membership applications submitted through the public “Join HIBCW” form. Applications can be filtered by status: Pending, Approved, or Rejected.

6.1 Reviewing an Application

- Each card shows: applicant name, business name, address, email, phone, district, any notes they included, and submission date
- Pending applications have a gold left border; approved are teal; rejected are red

6.2 Approving an Application

9. Find the pending application
10. Click “✅ Approve” and confirm
11. The applicant is added to the verified members list
12. If the district already has a captain assigned, their captain’s name is automatically populated on the new member record

6.3 Other Actions

- Reject — marks the application as rejected; the applicant is not added to the member list
- Revoke — removes an approved member’s verified status and removes them from the member email list
- Re-approve — re-approves a previously rejected application
- Delete — permanently removes the application record from the database

> 💡 **District Captains Can Also Act**
>
> District Captains can approve, reject, revoke, and re-approve applications within their own district. Only admins can delete application records permanently.

7. Districts & Captains

The Districts screen is the hub for all nine HIBCW districts. It has two tabs — Overview and Directory — and includes tools to manage captains, upload photos, and print rosters.

7.1 District Overview & Stats

The Overview tab shows a card for each district containing:

- Captain photo, name, business, phone, and email
- Four stat tiles: member count, incidents this month, this week, and today
- Last reported date
- Top-4 active incident type breakdown bars
- "👥 Members" button — opens the full member roster for that district
- "👮 Set Captain" button — opens the captain assignment modal (admin-only)

7.2 Assigning District Captains

Admins can assign or change the district captain for any district.

Step 1 Open Set Captain

Click the "👮 Set Captain" button on a district card in the Overview tab

Step 2 Select the Captain

A modal opens showing all verified members in that district
Search by name, email, or business using the search bar
Click the row of the member you want to assign as captain

Step 3 Save

Click "Save Captain" to confirm
The captain's name is written to all member records in that district
The district card updates immediately with the new captain's details

💡 **Tip**

The captain must be a verified member of that district to appear in the selection list. If the intended captain is not yet a member, add them to the members list first, set their district, and then assign them as captain.

7.3 Captain Photo Upload

Each district card displays the captain's photo. Admins (and the captain themselves) can upload or change this photo.

13. In the district Overview tab, hover over the captain's photo or initials avatar
14. A "📷 Change" or "📷 Upload" overlay appears
15. Click it and select a JPG, PNG, or WebP image up to 4 MB
16. The photo uploads to storage and the district card updates immediately

7.4 Captain Directory & Print

The Directory tab shows a searchable list view of all 9 districts with each captain's name, business, email, and phone. Click the "☉ Print PDF" button to generate a print-optimized landscape PDF directory of all captains, suitable for distribution at KIAA meetings or for internal reference.

7.5 District Member Roster

From any district card (Overview tab), click "👥 View Members" to open a modal showing all verified members in that district. The roster includes name, captain badge (if applicable), business, phone, and email. A "☉ Print Roster" button generates a formatted landscape PDF roster for that district.

8. District Alerts

District alerts allow admins and captains to send messages directly to the community. Alerts appear on the public-facing website and mobile app within seconds of being sent.

8.1 Sending an Alert (Admin)

Admins can send alerts to any district from the Districts screen.

17. Click the "📢 Send District Alert" button in the Districts toolbar
18. Select the target district from the dropdown
19. Type your message
20. Optionally attach a photo or video using the 📎 Attach File button
21. Click "📤 Send Alert"

The recent alerts log at the bottom of the modal shows the last 20 alerts across all districts.

8.2 Editing an Alert

Sent alerts can be edited after the fact. In the alert log, click the "✏️ Edit" button on any alert to load its content back into the composer. Update the message or media and click "💾 Save Changes". Edited alerts show an "edited" tag publicly.

8.3 Deleting an Alert

Click the "✕" button on any alert in the log to permanently remove it. If the alert had an attached photo or video, the media file is also deleted from storage. Removed alerts disappear from the public site immediately.

8.4 Where Alerts Appear Publicly

- A slide-up banner on the map page (both desktop and mobile) for alerts from the last 48 hours
- The "📢 Alerts" tab in the side panel (desktop) or the More screen (mobile), showing the last 20 alerts across all districts
- Alerts are real-time — visitors see new alerts without refreshing

9. Map View

The Map View screen shows all active incidents plotted on an interactive Leaflet map. It is available to all admin roles and provides a geographic perspective on community activity.

9.1 Map Controls

- STREET / SATELLITE — toggle between street and satellite base maps
- CLUSTER — toggle marker clustering (groups nearby incidents into numbered circles)
- HEATMAP — toggle a heat layer showing incident density across the island
- DISTRICTS — toggle district boundary overlays with color-coded polygons

9.2 Map Sidebar

The right sidebar lists all currently mapped incidents in chronological order. Click any card to pan the map to that incident and highlight its marker. Clicking a marker on the map highlights the corresponding card in the sidebar.

9.3 Map Popups

Click any marker on the map to open a popup showing the incident type, address, and time. Click “View Details” in the popup to open the full incident detail modal without leaving the map.

10. Statistics

The Statistics screen gives a high-level overview of incident data. It can be filtered by district to focus on a specific area.

10.1 Stat Tiles

- Active — currently active incidents
- Archived — archived incident count
- Total — all incidents ever recorded
- Last 30 Days — incidents reported in the past month
- With GPS Pin — incidents that have map coordinates
- With Media — incidents with attached photos or video

10.2 Type Breakdown

A bar chart showing active incidents by type, sorted by frequency. Use the district filter dropdown at the top to scope the data to a specific district.

10.3 District Breakdown

A second bar chart showing active incidents by district. Each bar is clickable — clicking a district bar automatically applies that district as a filter across the stats view.

11. Manage Admins (Superadmin Only)

The Manage Admins screen is only accessible to Superadmins. It allows you to view all current admin and captain accounts, invite new users, and modify or remove existing accounts.

11.1 Viewing Admin Accounts

The accounts table shows: full name, email, role badge, district assignment (for captains), last sign-in date, and action buttons.

11.2 Inviting a New Admin or Captain

Step 1 Fill in the Invite Form

Enter the new user's email address

Select a role: Admin, Captain, or Superadmin

If inviting a Captain, select their assigned district from the dropdown that appears

Step 2 Send the Invite

Click "✉️ Send Invite"

The system creates the account in Supabase Auth and sends a "Set your password" email to the new user

The invite link in the email is valid for a limited time — prompt new users to set their password promptly

Step 3 Confirm

The new account appears in the admin table

The user can now sign in at admin.html with the password they set

> 💡 **Tip**
> If a new user doesn't receive their invite email, check their spam folder. You can re-trigger the set-password flow by using the "Forgot password?" link on the sign-in screen with their email address.

11.3 Editing an Account

Click "✏️ Edit" on any account row to open the edit modal. You can update the account's full name, role, and district assignment. Click "Save Changes" to apply.

11.4 Removing an Account

Click “Remove” on any account row (except your own) to revoke their admin access. The user will no longer be able to sign in to the admin panel. This does not delete their Supabase Auth account — it removes their role record.

> ⚠ **You Cannot Remove Your Own Account**
>
> The Remove button is hidden on the row that matches your own email address. To remove your own access, have another Superadmin do it, or contact your HIBCW technical administrator.

12. Admin vs. Superadmin Permissions

This table summarizes the distinction between Admin and Superadmin. Both roles share access to all day-to-day functions. The differences are confined to account management.

✅ Admin CAN	🚫 Superadmin Only
View, search, and filter all incidents across all districts	Invite new Admin, Captain, or Superadmin accounts
Archive, restore, and delete any incident	Remove existing admin accounts
Bulk archive or delete multiple incidents	Edit admin roles and district assignments
Add follow-up notes to any incident	Access the Manage Admins screen
Export incidents to CSV (active, archived, all)	
Add, edit, import, remove, and export members	
Approve, reject, revoke, and delete applications	
Assign and reassign district captains	
Upload captain photos for any district	
Send, edit, and delete district alerts for any district	
View full statistics and district breakdown	
Use the map view with all overlays	
Print the captain directory and district rosters	

13. Tips & Best Practices

Incident Hygiene

- Review the Active incidents queue daily during busy periods — stale reports degrade the public map's usefulness
- Archive resolved incidents promptly and add a note explaining the resolution before archiving
- Use the radius filter to check for clustering in a neighborhood or business district
- Reserve permanent deletion for clearly invalid or test submissions only

Member Management

- Approve applications from the Applications screen rather than manually adding emails where possible — it captures the full business profile
- After approving an application, check that the district and captain name fields populated correctly on the member record
- Run an occasional export and review for outdated or duplicate entries

District Alerts

- Only send alerts for actionable, district-relevant information — over-alerting reduces community engagement
- Include media (photo or video) where available to increase credibility and urgency
- Cancel outdated alerts so the public feed stays current — a 5-day-old alert about a specific incident that has been resolved creates confusion

Account Security (Superadmins)

- Limit Superadmin accounts to the smallest number of people who genuinely need account management access
- Review the admin accounts table periodically and remove inactive accounts
- Captain accounts should be scoped to a single district — always verify the district assignment when inviting a new captain

Light & Dark Mode

- Both admin panels support light and dark mode via the ☀️/🌙 toggle in the header (desktop) or the More tab (mobile)
- The preference is saved per browser and persists across sessions

Thank you for helping keep Hawaii Island businesses safe.
