13. Tips & Best Practices

1. Understanding Admin Roles

HIBCW uses three distinct roles in the admin panel. Understanding the difference is essential for managing the platform effectively.

FEATURE	ADMIN	SUPERADMIN
View all incidents	✅ All districts	✅ All districts
Archive / restore incidents	✅ All districts	✅ All districts
Delete incidents permanently	✅ Yes	✅ Yes
Bulk archive / delete	✅ Yes	✅ Yes
Add / remove verified members	✅ Yes	✅ Yes
Edit member profiles	✅ Yes	✅ Yes
Import member CSV	✅ Yes	✅ Yes
Approve / reject applications	✅ All districts	✅ All districts
Delete applications	✅ Yes	✅ Yes
Assign district captains	✅ Yes	✅ Yes
Upload captain photos	✅ Any district	✅ Any district

FEATURE	ADMIN	SUPERADMIN
Send district alerts (any type, any district)	✅ Any district	✅ Any district
Archive / restore district alerts	✅ Yes	✅ Yes
Delete district alerts permanently	✅ Yes	✅ Yes
Export CSV (incidents/members)	✅ Yes	✅ Yes
Invite new admins / captains	❌ No	✅ Yes
Remove admin accounts	❌ No	✅ Yes
Edit admin roles & districts	❌ No	✅ Yes
Access Manage Admins screen	❌ No	✅ Yes

💡 KEY DISTINCTION

Admins and Superadmins have near-identical access to day-to-day operations. The only actions exclusive to Superadmins are those that affect admin accounts themselves — inviting new users, removing accounts, and changing roles. This ensures the admin roster can only be managed by the most trusted users.

2. Signing In

Admins access the panel at your deployment URL with "/admin.html" appended (e.g., hibcw.kiaahilo.org/admin.html). A mobile-optimized version is also available at "/admin-mobile.html".

- Enter your email address and password and click "Sign In →"
- If you've forgotten your password, click "Forgot password?" to receive a reset link
- On mobile devices, visiting admin.html will prompt you to switch to the mobile version automatically

🔑 ACCOUNT SETUP

Admin accounts are created by a Superadmin via the Manage Admins screen. You cannot self-register. If you need access, contact your HIBCW Superadmin and provide your email address and the role you require.

3. The Admin Interface

The desktop admin panel uses a fixed left sidebar for navigation and a main content area on the right. The mobile version uses a bottom tab bar with six tabs. Both surfaces connect to the same live Supabase database.

3.1 Desktop Navigation (admin.html)

- 🚨 **Active Incidents** — currently reported, active incidents
- 📦 **Archived Incidents** — resolved or removed from the public map
- 📋 **All Incidents** — combined view with status column
- 📈 **Statistics** — incident counts, type breakdown, district breakdown
- 🗺 **Map View** — interactive leaflet map of all incidents
- 📍 **Districts** — captain cards, directory, alert tools
- 👥 **Members** — verified member management (admin-only tab)
- 📋 **Applications** — membership application review and approval
- 🔐 **Manage Admins** — invite/remove admin accounts (superadmin-only tab)

3.2 Mobile Navigation (admin-mobile.html)

- 🚨 **Incidents** — searchable incident list with tap-to-detail
- 📊 **Stats** — stat tiles and type/district breakdown bars
- 👥 **Members** — member cards (admin-only tab)
- 📋 **Apply** — application review with pending badge count
- 📍 **Districts** — captain overview, directory, and alert tools
- ☰ **More** — account info, CSV exports, theme toggle, sign out

3.3 Real-Time Updates

Both panels subscribe to Supabase real-time channels. New incidents and district alerts appear instantly without requiring a page refresh. A live indicator dot in the header turns teal when connected and gold when reconnecting.

4. Incident Management

4.1 Viewing & Searching Incidents

The Active, Archived, and All Incidents views each show a sortable table of incidents. Use the search bar to search across type, address, description, and reporter name.

- **Active** — incidents currently visible on the public map
- **Archived** — incidents removed from public view but retained in the database

- **All** — combined view with a Status column; useful for cross-status searches

4.2 Filtering Incidents

Each incident view has an advanced filter panel accessible via the "⚙ Filters" button. Filters are additive — multiple filters narrow results simultaneously.

- **Type** — filter by incident category (Robbery, Burglary, Assault, etc.)
- **Date Range** — filter by custom start and end dates
- **District** — filter to a specific HIBCW district
- **Radius Search** — enter an address and radius in miles to find nearby incidents

Active filters appear as dismissible chips below the toolbar. Click the ✕ on any chip to remove that filter, or use "Clear All" to reset.

4.3 Archiving, Restoring & Deleting

- 📦 **Archive** — removes the incident from the public map without deleting it. Use this for resolved incidents, confirmed duplicates, or reports under review.
- ↩ **Restore** — returns an archived incident to active status and the public map.
- 🗑 **Delete** — permanently removes the incident and all associated media files from the database and storage. This cannot be undone.

> ⚠️ DELETE IS PERMANENT
>
> Deleting an incident removes it from the database forever, including all uploaded photos and videos. Always archive first unless you are certain the report is invalid. When in doubt, archive — not delete.

4.4 Bulk Actions

On the Active incidents view, you can select multiple incidents using the checkboxes on the left of each row.

1. **Select Incidents**
   - Check the box next to each incident you want to act on
   - Or use the header checkbox to select all visible rows
2. **Choose Action**
   - The bulk action bar appears showing the count of selected items
   - Click "📦 Archive Selected" or "🗑 Delete Selected"
3. **Confirm**

- Confirm when prompted — the action applies to all selected incidents

> 💡 TIP
>
> Use the type and date filters to narrow down a set of incidents before using bulk select. For example, filter to a specific type from a specific date range, then bulk archive all results at once.

4.5 Incident Detail & Notes

Click "View" on any incident row (or tap any card on mobile) to open the full detail panel. This shows:

- Date, time, and age tag
- District and assigned captain contact card
- Address with Google Maps Street View link (if GPS coordinates exist)
- Full description, reporter name, police report number
- Suspect description (height, build, age, gender, race, clothing, other)
- Vehicle description (make, model, color, year, plate, notes)
- Attached media (photos and videos, click to open lightbox)
- Follow-up notes log — add new notes or delete existing ones

Notes are visible to all admin and captain users and are never shown on the public site.

4.6 Exporting Incidents to CSV

Each incident view has an "⬇ Export CSV" button in the toolbar. The export includes all visible rows (after any active filters) with full incident, suspect, vehicle, and GPS fields. Files are named automatically, e.g., HIBCW_active_2026-03-14.csv.

5. Member Management

The Members screen manages the list of verified HIBCW members. Verified members receive a "✅ Verified Member" badge on any incidents they report through the public site.

5.1 Viewing & Searching

- Search by name, email, phone, business name, city, state, or zip code
- Filter by district using the district dropdown
- Each row shows: name, email, phone, business, address, district, captain, date added, and days active

5.2 Adding Members

You can add a verified member directly by email without requiring them to submit an application.

1 **Enter Email**

- Type the member's email in the "Enter email address to add..." field

2 **Add to List**

- Press Enter or click "＋ Add Member"
- The email is added to the verified member list immediately
- Their reports will show the verified badge from this point forward

> 💡 NOTE
>
> Adding a member by email creates a basic verified record. To attach a full profile (name, business, address, district), either ask the member to submit an application and approve it, or use the Edit function to fill in the details manually.

5.3 Importing Members via CSV

1. Click "⬆ Import CSV" in the Members toolbar
2. Select a CSV file where each row contains an email address in the first column
3. The system adds all emails not already in the list — duplicates are silently skipped

5.4 Editing Member Profiles

Click "✏️ Edit" on any member row to open the full edit form. You can update: full name, email, phone, business name, address, city, state, zip, district assignment, captain name, and profile photo (up to 4 MB).

5.5 Removing Members

Click "Remove" on any member row to remove them from the verified members list. This removes their verified status — future reports from that email will no longer show the member badge. Their past reports are not affected.

5.6 Exporting Members to CSV

Click "⬇ Export CSV" in the Members toolbar. The export includes: number, full name, email, phone, business name, address, city, state, zip, district, captain, date added, and days active.

6. Application Management

The Applications screen shows all membership applications submitted through the public "Join HIBCW" form. Applications can be filtered by status: Pending, Approved, or Rejected.

6.1 Reviewing an Application

- Each card shows: applicant name, business name, address, email, phone, district, notes, and submission date
- Pending applications have a gold left border; approved are teal; rejected are red

6.2 Approving an Application

1. Find the pending application
2. Click "✅ Approve" and confirm
3. The applicant is added to the verified members list
4. If the district has a captain assigned, their captain's name is automatically populated on the new member record

6.3 Other Actions

- **Reject** — marks the application as rejected; the applicant is not added to the member list
- **Revoke** — removes an approved member's verified status and removes them from the member email list
- **Re-approve** — re-approves a previously rejected application
- **Delete** — permanently removes the application record from the database

> 💡 DISTRICT CAPTAINS CAN ALSO ACT
>
> District Captains can approve, reject, revoke, and re-approve applications within their own district. Only admins can delete application records permanently.

7. Districts & Captains

The Districts screen is the hub for all nine HIBCW districts. It has two tabs — Overview and Directory — and includes tools to manage captains, upload photos, and print rosters.

7.1 District Overview & Stats

- Captain photo, name, business, phone, and email
- Four stat tiles: member count, incidents this month, this week, and today
- Last reported date and top-4 active incident type breakdown bars
- "👥 Members" button — opens the full member roster for that district

› "👮 Set Captain" button — opens the captain assignment modal (admin-only)

7.2 Assigning District Captains

1 **Open Set Captain**

- Click the "👮 Set Captain" button on a district card in the Overview tab

2 **Select the Captain**

- A modal opens showing all verified members in that district
- Search by name, email, or business using the search bar
- Click the row of the member you want to assign as captain

3 **Save**

- Click "Save Captain" to confirm
- The captain's name is written to all member records in that district
- The district card updates immediately with the new captain's details

> 💡 TIP
>
> The captain must be a verified member of that district to appear in the selection list. If the intended captain is not yet a member, add them first, set their district, then assign them as captain.

7.3 Captain Photo Upload

1. In the district Overview tab, hover over the captain's photo or initials avatar
2. A "📷 Change" or "📷 Upload" overlay appears — click it
3. Select a JPG, PNG, or WebP image up to 4 MB
4. The photo uploads to storage and the district card updates immediately

7.4 Captain Directory & Print

The Directory tab shows a searchable list view of all 9 districts. Click the "🖨 Print PDF" button to generate a print-optimized landscape PDF directory of all captains.

7.5 District Member Roster

From any district card, click "👥 View Members" to open a modal showing all verified members in that district. A "🖨 Print Roster" button generates a formatted PDF roster for that district.

8. District Alerts

District alerts allow admins and captains to send typed, categorized messages directly to the community. Alerts appear on the public-facing website and mobile app within seconds of being sent, with a colored type badge, a map pop-up banner, and 911 / HPD non-emergency call buttons for viewer safety. Every new or edited alert also triggers an automatic email to all verified members in the target district.

> 🚫 NO ADVERTISING POLICY
>
> District alerts may only be used to communicate safety-relevant information directly related to community crime awareness. Alerts may **not** be used to promote businesses, products, services, events, or any commercial interest — even if the sender has a legitimate relationship with the subject. Any alert used for advertising or promotional purposes will be removed and may result in loss of platform access.

8.1 Alert Types

Every alert must have a type selected before sending. The type controls the color coding, icon, and priority displayed to the public. Choose the type that most accurately describes the situation.

TYPE	TIER	USE WHEN
⛔ **EMERGENCY**	🔴 Critical	Active threat or imminent danger — triggers prominent 911 call buttons on the public site
👁 **BOLO**	🔴 Critical	Be on the lookout — known suspect, vehicle, or individual; include description and last known location
🟡 **AMBER / MISSING**	🔴 Critical	Missing child or vulnerable adult — triggers 911 call buttons on the public site
🚨 **INCIDENT ALERT**	🟠 High	Crime just occurred or is in progress — shoplifting, theft, break-in, assault
🔁 **PATTERN ALERT**	🟠 High	Same suspect, scam, or MO has hit more than one business in the district
💳 **SCAM ALERT**	🟠 High	Fraud, counterfeit bills, card skimmers, fake vendors, phone scams targeting businesses
🚫 **TRESPASS ALERT**	🟠 High	Known trespasser from one business — notify neighboring businesses to do the same
🫶 **WELFARE CHECK**	🟡 Medium	Suspicious or concerning person with no clear criminal behavior yet

TYPE	TIER	USE WHEN
✅ **ALL CLEAR**	🟢 Low	Follow-up to a prior alert — suspect apprehended, situation resolved, false alarm confirmed
📋 **INFO / ADVISORY**	⚪ Info	General awareness — law enforcement advisories, holiday crime trends, community notices

> 💡 TIP
>
> Critical tier alerts (EMERGENCY, BOLO, AMBER) automatically display prominent "Call 911" and "HPD Non-Emergency (808) 935-3311" tap-to-call buttons on the public site alongside the alert. All other alert types show a quieter safety reminder line. You do not need to add these numbers to your message manually.

8.2 Who Can Send Alerts

Alert sending works differently depending on your role.

ROLE	CAN SEND TO	HOW
District Captain	Their assigned district only	Alert composer in the Districts screen, below the Recent Alerts log
Admin	Any single district *or* island-wide	"📢 Send District Alert" button in the Districts toolbar — opens a modal with a district selector including the 🌺 Island-Wide option
Superadmin	Any single district *or* island-wide	Same modal as Admin, plus access to the Diagnose Archive tool

> 🌺 ISLAND-WIDE ALERTS
>
> Admins and Superadmins can send an island-wide alert by selecting 🌺 **Island-Wide — All Districts** at the top of the district dropdown. Island-wide alerts appear on the public feed for all visitors regardless of district, and the email notification goes to every verified member across all 9 districts. Use this for major island-wide threats, broad scam campaigns, or emergency advisories that are not district-specific. Captains cannot send island-wide alerts.

8.3 Sending an Alert

CAPTAINS — FROM THE DISTRICTS SCREEN

1. Go to the **Districts** screen and find your district's alert composer
2. Select the **Alert Type** from the dropdown
3. Type your message in the text area

4. Optionally attach a photo or video — click 📎 Attach File, select the file, and a preview will appear
5. Click 📤 **Send Alert**

ADMINS & SUPERADMINS — FROM THE DISTRICTS TOOLBAR

1. Click the 📢 **Send District Alert** button in the Districts toolbar
2. Select the **target district** from the dropdown — choose 🌺 **Island-Wide — All Districts** at the top for an island-wide alert, or select a specific district
3. Select the **Alert Type**
4. Type your message
5. Optionally attach a photo or video
6. Click 📤 **Send Alert**

After sending, the alert appears instantly on the public site and an email notification is dispatched to all verified members in the target district — or all members island-wide if Island-Wide was selected. The alert log updates immediately.

8.4 Attaching Media

Photos and videos can be attached to any alert. This is particularly useful for BOLO alerts (attach a suspect photo), SCAM alerts (attach an image of fraudulent currency or a skimmer device), or PATTERN alerts (attach security camera stills). Supported formats are standard image files (JPG, PNG, HEIC) and video files (MP4, MOV). A preview appears in the composer before you send.

> ⚠️ MEDIA & PRIVACY
>
> Do not attach images that clearly identify private individuals without their consent, or images obtained from private surveillance systems you do not control. Stick to business-owned cameras and publicly visible areas.

8.5 Editing an Alert

In the Recent Alerts log, click the ✏️ **Edit** button on any alert to load its content back into the composer. You can update the message, alert type, or media attachment. Click 💾 **Save Changes** to publish the update.

- Edited alerts display an *"edited"* tag publicly so viewers know the content was updated
- Editing an alert triggers a new email notification to district members with the updated content
- To remove attached media from an edited alert, click ✕ **Remove** in the preview before saving

8.6 Archiving an Alert

Archiving removes an alert from the public feed immediately but **keeps it permanently in the database as a record**. Use archiving — not deletion — to preserve proof of activity, document incidents for reporting, or remove resolved alerts while retaining the history.

1. Find the alert in the Recent Alerts log

2. Click the 📦 **Archive** button
3. Confirm when prompted — the alert is immediately removed from the public site

Each archived record shows who sent it, when it was sent, who archived it, and when — a complete audit trail. Archived alerts can be ↩ **Restored** to the public feed or permanently deleted from the Archived Alerts section.

> 📋 PROOF OF ACTIVITY
>
> Archived alerts serve as a permanent activity log — useful for grant reporting, law enforcement briefings, community meetings, and demonstrating HIBCW's value to stakeholders. Archive alerts rather than deleting them whenever possible.

8.7 Deleting an Alert

Click the ✕ button on any alert to permanently remove it from the database. If the alert had media attached, the media file is also deleted from storage. **This action cannot be undone.** Prefer archiving over deletion to preserve the activity record.

8.8 Active Alerts View

The **Active Alerts** screen (left navigation → Alerts section) shows a full-page view of all currently live alerts. It is available to all roles.

- **Admins & Superadmins** — see all active alerts across every district, with district and type filter dropdowns. Can archive or delete any alert.
- **District Captains** — see only their own district's active alerts. The district filter is locked to their district automatically. Can archive alerts in their district — delete is not available to captains.
- Each alert card shows the type badge, district badge, message, any attached media, sender name, and timestamp

8.9 Archived Alerts View

The **Archived Alerts** screen shows the historical record of alerts that have been archived. It is available to all roles.

- **Admins & Superadmins** — see all archived alerts across every district, filterable by district and type. Can restore or permanently delete any archived alert.
- **District Captains** — see only their own district's archived alerts. The district filter is locked automatically. Captains can view the archive history but cannot restore or delete — those actions are admin only.
- Each record includes the original message, media, alert type, who sent it and when, and who archived it and when — a complete audit trail

8.10 Email Notifications

Every time an alert is sent or edited, an automatic email is dispatched to all verified members in the target district. The email includes the alert type, message, and sender name. Members do not need to be logged in or have the app open to receive these notifications — they arrive in their inbox immediately.

> 💡 MEMBER EMAILS
>
> Email notifications go to addresses in the `member_emails` table for the target district. If a member isn't receiving alerts, verify their email is in that table via Supabase → Table Editor → member_emails.

8.11 Where Alerts Appear Publicly

- **Slide-up banner** — appears automatically on the public map page for alerts from the last 48 hours, with the type icon, district, message, and safety call buttons. Visitors can dismiss it once per session. The alert reference number appears in the banner meta line.
- **Alerts tab / screen** — the "📢 Alerts" tab in the desktop side panel and the Alerts screen on mobile show the full active alert feed, with type badge, district badge, alert reference number, and safety reminders on every card
- **Real-time** — alerts appear instantly without the visitor needing to refresh
- **Archived alerts** are automatically hidden from the public feed

8.13 Alert Reference Numbers

Every district alert is automatically assigned a unique reference number in the format `ALT-D3-20260322-4A1B`. The number is derived from the district, the date the alert was sent, and the last 4 characters of the alert's database ID — no setup required, and all existing alerts get a number automatically.

PART	EXAMPLE	MEANING
ALT	ALT	Identifies this as an alert (vs. `INC` for incidents)
District prefix	D3	D1–D9 for each district; `DIW` for island-wide alerts
Date	20260322	Date the alert was sent (YYYYMMDD)
Suffix	4A1B	Last 4 characters of the alert's unique database ID

Alert numbers appear in the admin panel (Recent Alerts log, Active Alerts view, Archived Alerts view) and on the public-facing site (alert feed cards and the slide-up banner). Use them when referencing a specific alert in communications with law enforcement, in grant reports, or when coordinating across districts.

8.12 Diagnose Archive Tool Superadmin Only

If the archive button on alerts stops working, Superadmins can run the 🔧 **Diagnose Archive** tool found in the Districts screen toolbar. It checks that the required database columns and indexes are in place and reports any issues. Run this if archiving produces an error or silently fails.

9. Map View

The Map View screen shows all active incidents plotted on an interactive Leaflet map. It is available to all admin roles and provides a geographic perspective on community activity.

9.1 Map Controls

- **STREET / SATELLITE** — toggle between street and satellite base maps
- **CLUSTER** — toggle marker clustering (groups nearby incidents into numbered circles)
- **HEATMAP** — toggle a heat layer showing incident density across the island
- **DISTRICTS** — toggle district boundary overlays with color-coded polygons

9.2 Map Sidebar & Popups

The right sidebar lists all currently mapped incidents. Click any card to pan the map and highlight its marker. Click any map marker to open a popup — click "View Details" to open the full incident detail modal without leaving the map.

10. Statistics

The Statistics screen gives a high-level overview of incident data, filterable by district.

10.1 Stat Tiles

- Active, Archived, Total, Last 30 Days, With GPS Pin, With Media

10.2 Type & District Breakdown

A bar chart showing active incidents by type, sorted by frequency. A second chart shows incidents by district — clicking a district bar applies that district as a filter across the stats view.

11. Manage Admins Superadmin Only

The Manage Admins screen is only accessible to Superadmins. It allows you to view all current admin and captain accounts, invite new users, and modify or remove existing accounts.

11.2 Inviting a New Admin or Captain

1. **Fill in the Invite Form**
   - Enter the new user's email address
   - Select a role: Admin, Captain, or Superadmin

- If inviting a Captain, select their assigned district from the dropdown

2 **Send the Invite**

- Click "✉️ Send Invite"
- The system creates the account and sends a "Set your password" email
- The invite link is valid for a limited time — prompt new users to act promptly

3 **Confirm**

- The new account appears in the admin table
- The user can now sign in at admin.html with the password they set

11.3 Editing & Removing Accounts

Click "✏️ Edit" on any account row to update the full name, role, and district assignment. Click "Remove" to revoke admin access — note that you cannot remove your own account.

> ⚠️ **YOU CANNOT REMOVE YOUR OWN ACCOUNT**
>
> The Remove button is hidden on the row that matches your own email address. To remove your own access, have another Superadmin do it, or contact your HIBCW technical administrator.

12. Admin vs. Superadmin Permissions

This table summarizes the distinction between Admin and Superadmin. Both roles share access to all day-to-day functions. The differences are confined to account management.

✅ ADMIN CAN	🚫 SUPERADMIN ONLY
View, search, and filter all incidents across all districts	Invite new Admin, Captain, or Superadmin accounts
Archive, restore, and delete any incident	Remove existing admin accounts
Bulk archive or delete multiple incidents	Edit admin roles and district assignments
Add follow-up notes to any incident	Access the Manage Admins screen
Export incidents to CSV (active, archived, all)	
Add, edit, import, remove, and export members	

✅ ADMIN CAN	🚫 SUPERADMIN ONLY
Approve, reject, revoke, and delete applications	
Assign and reassign district captains	
Upload captain photos for any district	
Send, edit, archive, restore, and delete district alerts for any district or island-wide	
View Active and Archived Alerts across all districts	
View full statistics and district breakdown	
Use the map view with all overlays	
Print the captain directory and district rosters	

13. Tips & Best Practices

Incident Hygiene

- Review the Active incidents queue daily during busy periods — stale reports degrade the public map's usefulness
- Archive resolved incidents promptly and add a note explaining the resolution before archiving
- Use the radius filter to check for clustering in a neighborhood or business district
- Reserve permanent deletion for clearly invalid or test submissions only

Member Management

- Approve applications from the Applications screen rather than manually adding emails — it captures the full business profile
- After approving an application, check that the district and captain name fields populated correctly on the member record
- Run an occasional export and review for outdated or duplicate entries

District Alerts

- **Always select the correct alert type** — the type determines the color, icon, and priority displayed publicly. Critical types (EMERGENCY, BOLO, AMBER) automatically display 911 and HPD call buttons to the public
- Only send alerts for actionable, district-relevant information — over-alerting reduces community engagement

- Include media (photo or video) where available to increase credibility and urgency
- **Archive rather than delete** — archived alerts are permanently preserved as a record of activity. Use this for proof of concept reporting, law enforcement briefings, and grant documentation
- Send an ALL CLEAR alert to close out a prior BOLO, INCIDENT, or EMERGENCY alert once resolved
- **Never use alerts for advertising or promotion** — alerts are strictly for community safety information. This includes promotions for businesses, events, or services, even ones you support. See Section 15 of the Terms of Use.

Account Security (Superadmins)

- Limit Superadmin accounts to the smallest number of people who genuinely need account management access
- Review the admin accounts table periodically and remove inactive accounts
- Captain accounts should be scoped to a single district — always verify the district assignment when inviting a new captain

Light & Dark Mode

- Both admin panels support light and dark mode via the ☀️/🌙 toggle in the header (desktop) or the More tab (mobile)
- The preference is saved per browser and persists across sessions

Thank you for helping keep Hawaii Island businesses safe.
